

# FG12

## FORCE GAUGE FOR YOUR 12,000 LB WIRE PULLER

**iTOOLco.**

**CAUTION: If an exact pulling force measurement is required, always use a true running line tension meter that has been calibrated in conjunction with the rope being used for pulls.**

- For use with iTOOLco. Cannon 12K only (Model C12K)
- Use 10ga. extension cord or larger to allow voltage drop.
- Always inspect unit for damage before use, including cord.
- Force gauge is designed for use with the puller in LOW speed only.
- Force displayed on the gauge is within 15% of true force applied if below variables are met.
- When portable generator power is used, always use correct size for load required, 100A is recommended.
- Supplied voltage: 120V at 60hz.
- Limit length of extension cord to 50'
- Use 10 gauge or larger extension cords.
- Force gauge calibrated at time of manufacturing
